**OPEN ACCESS:** <https://www.aemet.es/es/serviciosclimaticos> variable select

Exploring, for any water reservoir or grid point over continental Spain, the existing **hydrological variability and hazard linked to climate variability**.

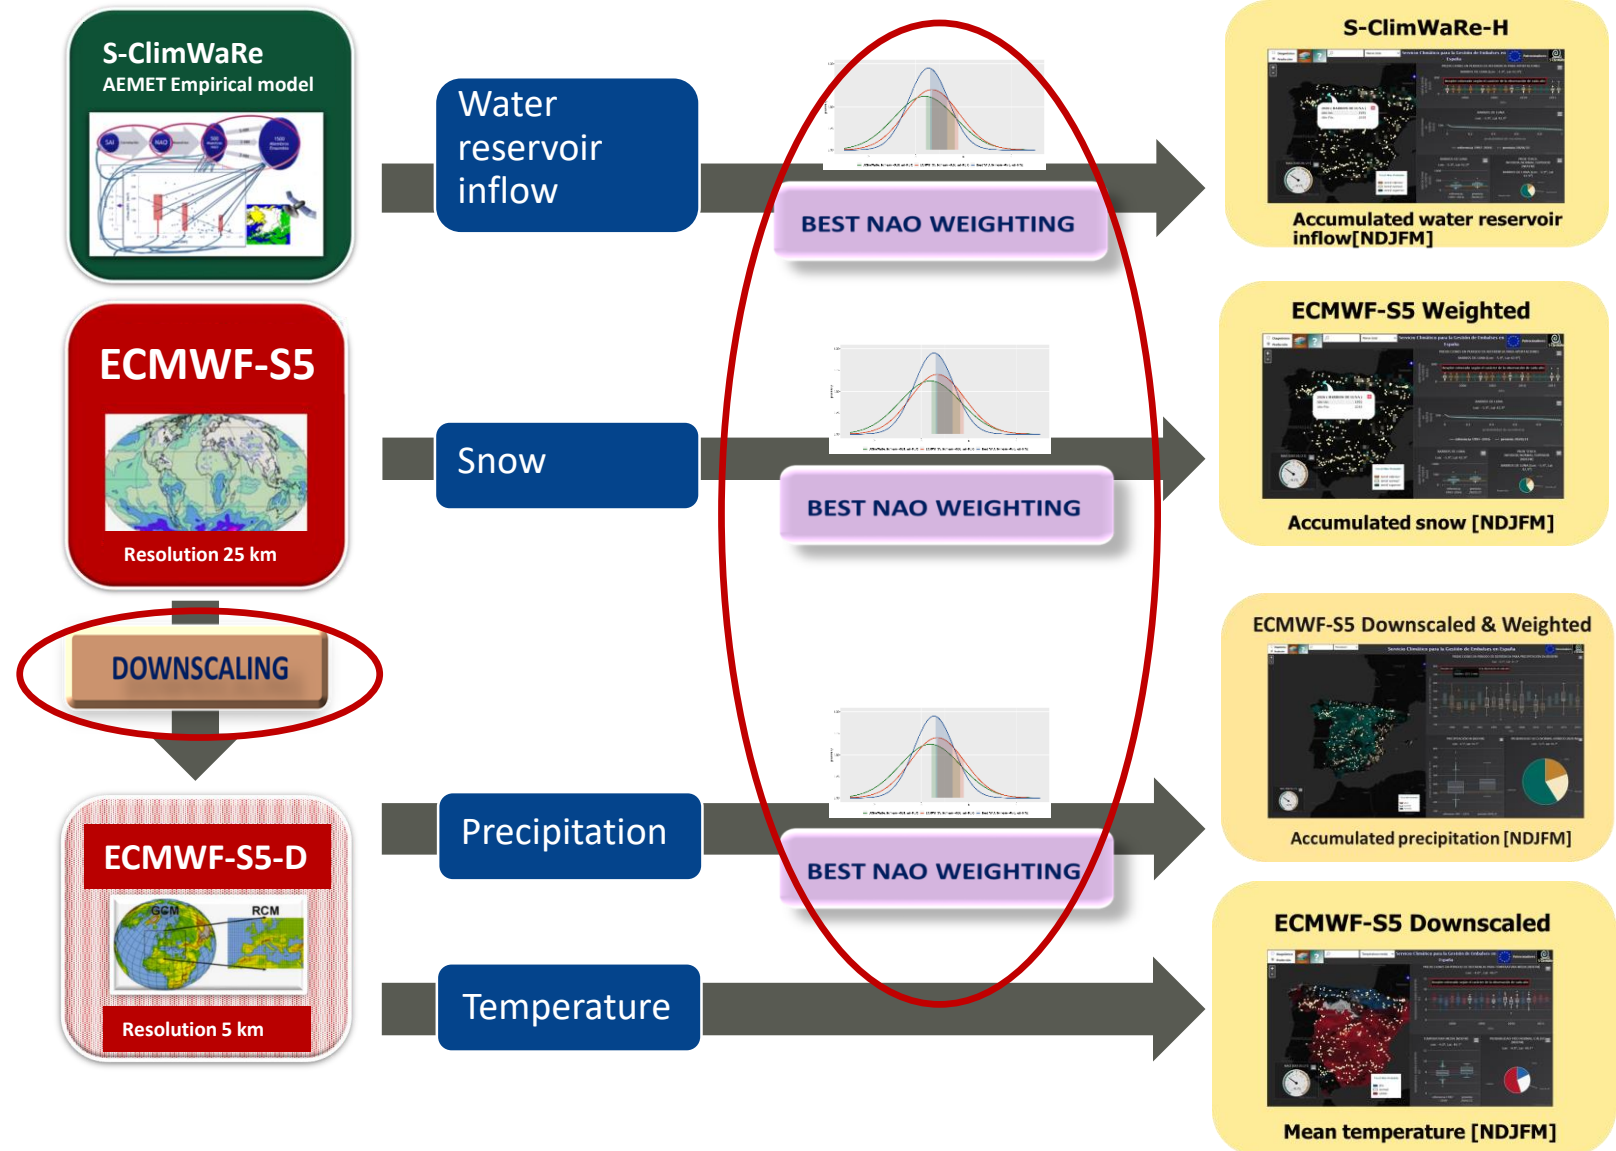

Seasonal predictions for November to March **accumulated water reservoir inflow, precipitation, snow and temperature**. Probabilistic forecasts and its skill were jointly displayed in the web tool.

Using two functions from the MEDSCOPE Toolbox for Climate Forecasts postprocessing:

- **Downscaling**
- **Weighting**

WEB TOOL
